

 MTS TECHNICAL ASSIGNMENT

Nafeza Platform Redesign

Imports Analytics & Risk Management Framework

PREPARED BY

Selvana Naguib

Senior Product Designer

TARGET INSTITUTION

Misr Technology Services (MTS)

Submission Date: 19 May 2026

Benchmarking & Market Insights

02 / 12

Analyzing regional and global systems handling high data-density compliance operations:

Fasah (KSA)

Pioneered split-screen transaction layout for real-time risk triage.

 Side-by-Side

Al-Nadeeb (Qatar)

High-density portal matching importer tax logs with customs files.

 Highly Integrated

PwC Customs

Global framework that maps valuation gaps directly to auditor checklists.

 Audit Ready

Customs City

Modern tech platform using anomaly markers within unified views.

 High Risk Radar

User Persona Spotlight

03 / 12

Tareq El-Shamy

Senior Compliance & Risk Analyst

Role Profile: Oversees trade integrity across Egyptian sea and air ports by monitoring raw import data streams for fraud, smuggling, or tariff evasion.

Figma Native User

Data-Fluent

High Stress Role

🎯 Core Goal

To identify high-risk anomalies, minimize "noise" from false positives, and take legal, auditable actions without context switching.

+ Key Needs

Clear visual indicators for abnormal behavior, dynamic pricing comparison, and rapid drill-down files directly on screen.

⚠️ Pain Points

Overwhelming data volume, difficulty correlating disparate tax and cargo records, and static legacy screens without direct action controls.

Design Logic & Strategic Assumptions

04 / 12

Domain Expertise

We assume users are trained professionals who understand customs legal codes, international HS classifications, and cargo risk indicators. The interface can use expert-level terminology safely.

Data Reliability

Auditors operate under the strict assumption that system-flagged anomalies correspond directly to verified, live trade streams compared against clean historical market baselines.

Workflow Integration

This dashboard is designed to be the primary workspace for an analyst's 8-hour shift, requiring native action capabilities instead of functioning as a passive, static report.

Accountability

Every decision—whether releasing cargo, marking an importer as "Compliant," or "Freezing" a record—must generate a structured log for state audit compliance.

Primary Operational Goals

05 / 12

Reduce Time-to-Action

Our layout aims to help Tareq filter out normal "noise" within two seconds, allowing him to focus human review purely on high-threat cases.

Root Cause Analysis

To provide immediate understanding behind a risk rating by offering comparative price, country-of-origin, and broker links side-by-side.

Ensure Compliance

Maintain the highest standard of trade security by detecting patterns like systematic tax evasion and invoice tampering early.

Audit-Ready Actions

Incorporate standardized risk action gates (Classify, Suspend, Escalate) directly into the UI, satisfying internal security logs.

Nafeza Design System Tokens

06 / 12

Nafeza Brand Color System

#203F7F Primary Blue	#17529E Secondary	#0F172A Dark Neutral	#E2E8F0 Border
-------------------------	----------------------	-------------------------	-------------------

Semantic Risk & Alert Tokens

#A70000 Negative	#F0BE0E Caution	#006635 Success	#EBEDEE Neutral
---------------------	--------------------	--------------------	--------------------

A Typography Grid

We chose **IBM Plex Sans** & **IBM Plex Sans Arabic** over Cairo for our internal dashboards. It delivers unmatched numeric clarity and high-density legibility.

Style	Size	Line-H
Display Large	57px	64px
Headline Large	32px	40px
Body Medium	14px	20px

Reusable System Components

07 / 12

Persistent Top Navigation

 **NAFEZA** Overview Compliance

Keeps primary modules permanently available for rapid context switching.

Dual Localization Toggle

العربية (RTL) English (LTR)

Ensures full translation while retaining equivalent visual hierarchy and numeric scaling.

Contextual Search Bar

 بحث برقم الإقرار، المستورد... 

Provides autocomplete results matching the current transaction queue instantly.

Design Ideation: Scratch to Wireframe

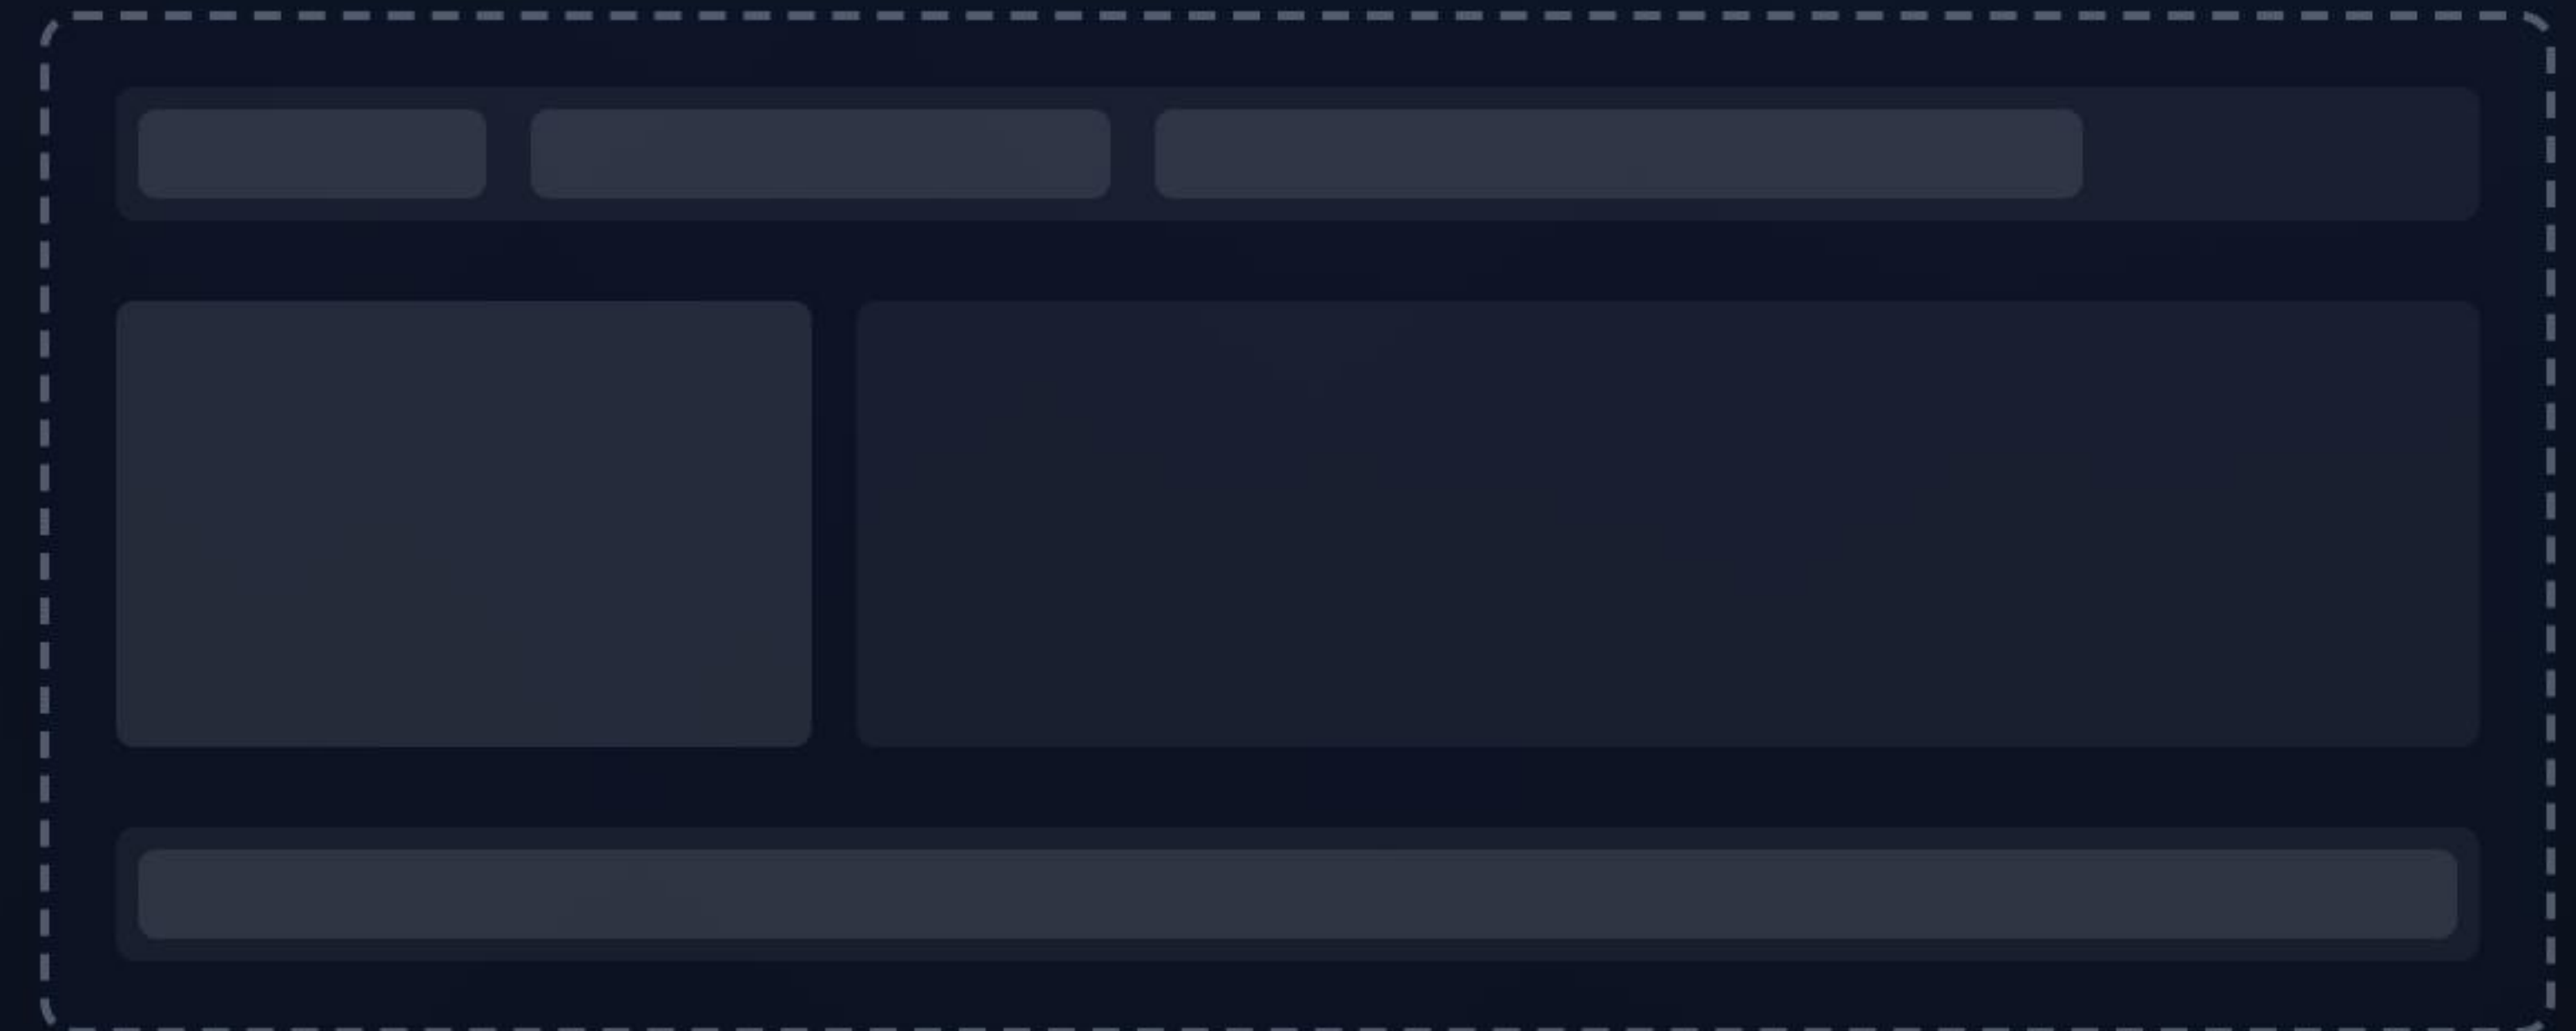

08 / 12

Concept Scratches (Page 8)

The hand-drawn notebooks focused on structured information prioritization:

- Mapping transaction flow timeline and overall cargo activity.
- Formulating structural "risk indicators" to capture price spikes.
- Visualizing side-by-side transaction documents & importer files.

Wireframe Blueprint

Screen 1: National Import Overview

09 / 12

TOTAL ACTIVE SHIPMENTS

142,530

ACTIVE HIGH-RISK THREATS

342 Alerts

AVG. AUDIT RESOLUTION TIME

4.2 Hours

Declaration ID	Importer Name	HS Code	Declared Value	Risk Priority
#2026/40832	Ghabbour Auto	8517.13	2,000M EGP	High Risk
#2026/41095	Delta Star Co.	8542.31	94M EGP	Moderate
#2026/15240	Trade Line Egypt	8471.30	14M EGP	Compliant
#2026/89431	Cairo Imports Ltd	8504.40	8.5M EGP	Low Risk

Screen 2: Anomaly Context Workspace

10 / 12

⚠ Threat Context Panel

We provide Tareq with complete relational data surrounding any anomalous importer profile:

AI Signal Flag: Extreme under-valuation detected on HS Code 8517 (variance gap exceeded 22.2% market average).

✓ Approve Cargo

⛔ Hold Cargo

Mandatory Audit Attachments

Attachment Name	Size	Verification
 Commercial Invoice	2.4 MB	Rejected
 Customs Declaration	1.1 MB	Approved
 Packing List	1.6 MB	Under Review

**All auditing decisions automatically generate a cryptographically signed transaction block in the legal database.*

30%

Of Sector Anomaly Footprint

Ghabbour Auto Strategic Audit

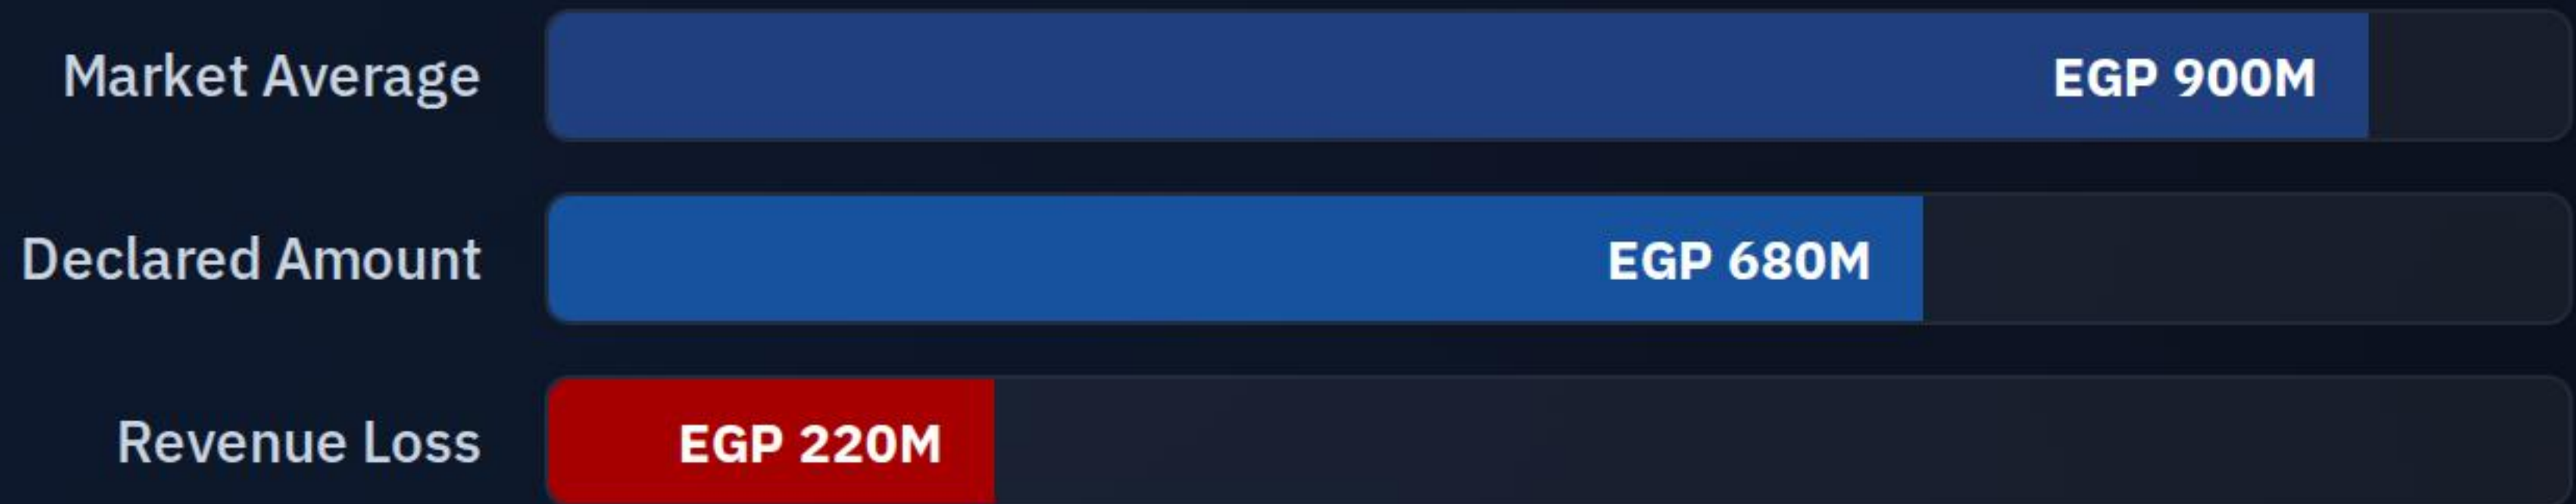

Our risk engine flagged that a single conglomerate, **Ghabbour Auto**, accounts for **30% of total recorded trade anomalies** in the automotive and machinery sector.

Recommended System Response: All customs declarations linked to this tax identification number (TIN: 200-444-781) will trigger a mandatory, high-priority "Post-Clearance Audit" and physical scanning protocol.

Valuation Anomaly Trend Analysis

12 / 12

⚠️ **TOTAL DEFICIT: EGP 220M** (Valuation Gap of -24.4%)

Unified Action Framework

By presenting this data visually, we enable Tareq to confidently deploy the platform's four core actions:

🚩 **Classify**

❄️ **Freeze**

📄 **Escalate**

📤 **Export**
